

Кинематика плоского механизма

Многосвязный механизм приводится в движение кривошипом OA , вращающимся с известной угловой скоростью и случайным угловым ускорением с известным рядом распределения $p = [0.2, 0.3, 0.4, 0.1]$. Найти математическое ожидание угловых ускорений звеньев.

Длины звеньев даны в см, угловые скорости — в рад/с, угловые ускорения — в рад/с². Стержни, положение которых не определено углом, вертикальны или горизонтальны.
