

Деформации изогнутого стержня

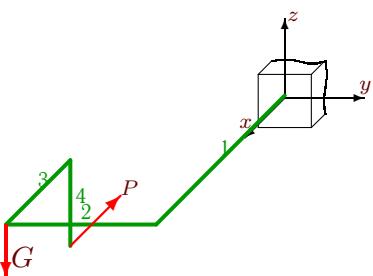

Участки изогнутого стержня параллельны осям координат. К стержню приложены силы G и P . Построить эпюры изгибающих и крутящих моментов. Определить перемещения конца стержня (в см) по направлению действия силы P , пренебрегая весом стержня и влиянием нормальных и перерезывающих сил. Найти угол поворота концевого сечения относительно оси участка 4. Принять жесткость на изгиб $EJ_x = EJ_y = 9.8 \cdot 10^5 \text{ Нм}^2$, на кручение $EJ_0 = 7.6 \cdot 10^5 \text{ Нм}^2$.
